

**ComforLid:**

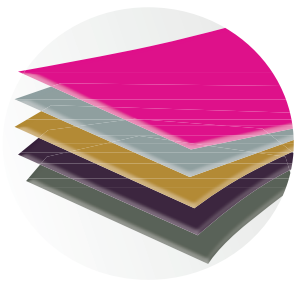

**Same drinking pleasure –  
less plastic waste**

**THE SUSTAINABLE ALTERNATIVE FOR LESS PLASTIC WASTE –  
FOR ALL OF US AND THE ENVIRONMENT.**

ComforLid by Constantia Flexibles, is a perfect addition to Constantia's Ecolutions family product range. It replaces a conventional plastic snap on cups and straws through an integrated drink opening in the lid, which makes a lasting contribution to reducing plastic waste.

# Same drinking pleasure – less plastic waste

- Print
- Aluminum
- Lacquer
- Coex Coating
- Laser

## HOW DOES COMFORLID WORK?

The innovative ComforLid is a double layer die cut lid composed of one aluminum layer and a coextrusion plastic layer.

The consumer peels off the aluminum layer; the plastic layer with the perfectly placed opening remains on the cup.

- ✓ Convenient drinking pleasure, without the need for a plastic snap-on lid and straw
- ✓ Infinite openings shape options
- ✓ Hygienically clean and protected drink opening, which – unlike a plastic snap-on – cannot be removed before consumption or get lost.
- ✓ Microwaveable – after peeling off the alu layer

## HOW IS COMFORLID PRODUCED?

The opening in the plastic layer is created using a laser, which means there is an infinite number of different shapes that can be created.

- Runs on conventional filling lines
- No investment required on the customer side
- Seals to PP-Cups

## WHAT PRODUCTS CAN COMFORLID BE USED ON?

This packaging solution is ideally suited for liquids like coffee drinks, drinking yoghurts, whey or soft drinks.

The bespoke precise opening means that this innovative opening ComforLid is also well suited to:

- Chocolates
- Herbs
- Chewing Gum
- Fruit gums
- Sweets
- Cheese in brine
- and many more ...
