

A **PACK** OF
PERFORMERS

New innovations in
Performance Packaging

OUR APPROACH

- Transparent, high-performance, co-extruded
- High performance sealing films & coatings
- Packaging for new applications and requirements
- Reduced material consumption

Performance Packaging

FoldAdLam

FoldAdLam by Constantia Flexibles is a special wax-free laminate, developed in-house, which can be applied for all wrapping applications that need good deadfold properties.

- No analytical false positive findings of MOSH/MOAH, originating from waxes
- Individual adhesive development - depending on the application / on the packaging machine
- Perfect deadfold properties
- No usage of wax – reduction of grammages
- Better bond strength compared to wax
- Can be used for aluminum laminates (paper, film)

Transparent Barrier Laminates

An alternative for PE-EVOH that allows access to additional target markets, including transparent lidding and Triplex laminates for FFS and SUP Pouches.

ADVANTAGES

- Barrier without any recycling issues
- Flavor, gas & moisture barrier
- Highly transparent and light-weight
- Microwavable and easier metal detection
- High barrier against oxygen, water vapour (OTR + WVTR <1)
- High gloss with reverse printing
- High stiffness
- Lock-seal optimized for high burst pressure resistance >12bar

Alufoil Container Systems

Highend container systems for human food and pet food. This is a convenient lightweight packaging, that prolongs the shelf-life of products.

- retort
- pasteurization
- backed

ComforLid

ComforLid by Constantia Flexibles is a solution for convenient handling of dairy and other drinks.

- Unique market solution, due to co-extrusion coating
- Reduced spillage for the consumer
- Differentiation
- Convenience for the customer
- No investment in die cut tool necessary
- Tailored opening shapes
- Laser scoring available

Smooth Peel Coating Family

- PP-Peel Plus

PP-Peel is an aluminum die cut lid with a Constantia Flexibles proprietary co-extrusion coating. It has higher sealing strengths than the standard PP-Peel.

ADVANTAGES

- Very wide range of sealing temperatures (200 – 280°C)
- Continuous peeling
- Good seal through properties
- High corrosion resistance
- Sealable against PP and carton/PE-cups
- Higher sealing strength than standard PP-Peel
